

Significant Facts about the Company

- Capacity of 500te per week
- Family owned company
- 180+ Employees
- Financially stable and secure
- £32m turnover in 2011
- BCSA Sustainability Charter Gold Status

A One Stop Shop - Design, Fabrication and Erection

Caunton Engineering is one of the UK's leading fully automated structural steelwork contractors and arguably a world leader in 'Just-in-Time' manufacture. We offer a one stop solution to meet most of our clients steel construction needs, specialising in design, fabrication and erection of structural steelwork.

Specialist Facilities

A very strong Design & Build capability, our own erection department, and large painting shop offering controlled curing and drying.

A Scrupulous H&S Policy

Caunton is committed to delivering the highest quality service to our clients in a socially responsible manner. Safety is paramount and our adherence to the policy statement on health and safety is our highest priority. Our Health & Safety Management system is accredited to BS OHSAS 18001: 2007 standards.

Speed & Efficiency our priority

We are a solid and well respected company within the UK steelwork industry with efficiency vital to the service we provide. As an organisation we are quality assured to BS EN ISO 9001 and have gained accreditation to the prestigious Welding Quality Management System BS EN ISO 3834 Part 2. Due to the Hi-tech machinery employed within our production facility, production per man-hour is among the highest in the industry for comparable structures.

A Trusted and Trusting Partner

Throughout the supply chain Caunton encourages and welcomes Partnering Relationships. The company has official partnering status with several blue chip contractors and employs strong formal relationships with selected suppliers and subcontractors.

A skilful and thorough manager of risk

Does the industry really appreciate the full scope of where risk may occur? For instance, a competitor's downfall can cause a more far reaching problem than expected. A main contractor may well be financially stable but we know from experience that not all of their competitors are. A member of one contractor's supply chain may incur a bad debt from another contractor while working simultaneously on projects for both. This could well adversely affect the delivery of the project of the financially secure contractor.

At Caunton we insure our book debts so that should such an event occur then it will not affect our delivery of such third party projects. Working with Caunton ensures the safe delivery of your project. Not only are we financially very stable but we also diligently manage our wider business risks.

Operational Transparency through our Intranet

We are at the cutting edge of harnessing the latest in technology. We have integrated structural analysis with 3D building modeling, production control and CNC manufacturing and combined this with project management and financial systems. This improves business efficiency and enables our staff to provide high levels of service to our partners, customers and suppliers.

On-going commitment to Safety and Sustainability

Our commitment is to continuously train our workforce - educating individuals in health & safety issues throughout our operations. From this we can boast that 100% of the relevant workforce is CSCS qualified with the majority of senior management IOSH qualified. As an organisation we are CHAS and Achilles accredited and continuously strive to enhance our working practices. In addition to this the company has attained environmental accreditation to BS EN ISO 14001 and have received the highly regarded BCSA Sustainability Gold Award.

On the job training a must

Being a family owned company our employees are an integral part of the Caunton culture and we aim to be self sufficient in training new recruits. We first gained the renowned Investors in People accreditation in 1998 with 28% of our total workforce currently undergoing training and development.

Apprentice training too

In 2004 we opened our own in-house academy to address the industry's skills shortage. Formal relations were established with the local technical college and an official partnership with the EEF West Midlands Technology Centre for the delivery of Apprenticeships in fabrication & welding. In 2009 the academy was further expanded and enhanced and achieved the status of Accredited Training Centre.

Encouraging Future Generations

Caunton currently have an initiative in place aiming to educate youngsters in the construction process. So far we have had visitors from many and various schools. From these visits we are able to improve our education programmes and help the schools with theirs.

Valued by the Community and the Industry

Caunton have received much public recognition - being past winners of the coveted Nottinghamshire Company of the Year Award and being presented with the Structural Steel Design Award Certificates of Merit two years running.
