**Steel Tonnage**

650 tonnes

Caunton carried out the connection design, supply, fabrication and erection of the structural steelwork for this Customer Contact Centre for what was one of the UK's largest retailer, built in Sheffield.

At the time of this project, Call Centres were a busy market for Caunton, due to the surge in telephone communication demanded such facilities.

The completed structure incorporates the striking architectural feature of a 'gull wing' roof. Imaginative design of external walkways, in fact used for window cleaning access, further embellished the building's appearance.
