.....
Steel Tonnage

410 tonnes

Caunton Engineering supplied and erected a major car park structure in Bradford City Centre. The car park comprised of seven storeys of steel framing supporting pre-finished pre-cast floor units. Furthermore the design, illustrated in the photograph, clearly allows speedy and easy dismantling at the end of its life, thus the scope for sustainability and recycling is maximised.

Caunton were responsible for the erection of both the concrete and steelwork elements, supplying and fabricating 410 tonnes of steelwork. Main contract, Clugston Construction incorporated special safety measures which qualified the car park for a Secure by Design award, which means it met the special standards agreed with the police to help protect the public.

Clugston within their design and build contract employed the following professional team – Bowman Riley as architect and BSCP as structural engineer.
