Steel Tonnage

2,500 tonnes

Caunton completed the structural steelwork for a major leisure development in Cambridge. The complex required 2,500 tonnes of steelwork, framing both a leisure building and a 562 space multi storey car park. The leisure building itself housed a cinema, bowling alley, fitness rooms and restaurants.

This was the second phase of the development. Caunton had previously worked for main contract Birse Build on what was entitled The Auction Rooms development. Birse returned to Caunton for this second phase, which was the regeneration of the old cattle market site.

The three and four storey leisure building structure was erected to a speedy eight week programme and benefited from Caunton's highly regarded skills in design and build.

The four storey car park was designed by Caunton.
