Steel Tonnage

1,300 tonnes

Caunton supplied and erected 1,300 tonnes of main and secondary steelwork for three major towers in Coventry. The structural steelwork for the towers framed a major student accommodation scheme and supplied 502 en-suite rooms that was a mix of studio and cluster bedrooms constructed within three towers of six-storeys, 13-storeys and 19 storeys.

The above photographs shows the tower craneage had to be massive. Reaching a height of 72 metres, main contractor, Winvic Construction supplied these two tower cranes that resided in Coventry's city-centre skyline for the full project period as UNINN Parkside Developments Ltd's luxury student accommodation scheme was constructed.
